BOSS STOMPBOXES KICKING OFF A NEW ERA OF GUITAR EFFECTS

BOSS has just launched three innovative stompboxes: the DA-2 Adaptive Distortion, MO-2 Multi Overtone and TE-2 Tera Echo. Each features BOSS's new Multi-Dimensional Processing technology—which splits the signal into separate frequency bands for parallel processing—offering remarkable results. For instance, the DA-2 Adaptive Distortion delivers classic stompbox distortion that holds together no matter how far up the neck you play. The MO-2 Multi Overtone manipulates harmonic overtones, allowing guitarists to create anything from organ swells to extremely dynamic modulation effects. Equally as impressive, the TE-2 Tera Echo produces a massive range of echo tones and ambiances, plus there's a super-cool freeze function onboard.
