## ANTELOPE AUDIO ORION 32 STELLAR I/O FOR ANY PLATFORM

The **Antelope Audio Orion 32** USB audio interface packs a boatload of pristine AD/DA conversion into a single rack space, delivering a staggering 32 channels of both input and output at up to 24-bit/192 kHz resolution. In addition to its analog I/O—all handled by standard DB-25 connectors—the Orion 32 also sports ADAT and MADI digital connections, so it can easily integrate into a more advanced setup. Cooler still, Antelope built the Orion 32 to be class compliant, bringing high-track-count, high-quality audio to the Apple iPad.
