ISOACOUSTICS ISO-L8R200 SPEAKER STANDS

Stands that make a difference

IsoAcoustics ISO-L8R monitor stands are built to dynamically flex in response to speaker movement, allowing them to perform with greater efficiency for clearer sound and sharp stereo imaging. We were impressed with the new ISO-L8R200, which support more substantial monitors, but they also provide enough space to set a pair of Yamaha NS10 speakers on their sides. Straight away, the ISO-L8R200 lived up to their reputation—reducing energy transfer, adding space and definition to the mix. Small wonder top studios such as Abbey Road are using them.
