## RØDE iXY STEREO MIC FOR IOS

Stereo recording in a snap

The RØDE iXY is the world's first 24-bit/96 kHz microphone that instantly turns your iPhone or iPad into a stereo recorder. The first thing we noticed was the clear directionality of the broad X/Y stereo pickup pattern—perfect for high quality recording of anything from song ideas to full performances. RØDE also provides a free app that lets you attenuate input level, create unique track titles, and push your clips to SoundCloud or elsewhere on the web so you can share audio from the field. A handy windscreen and case is included.
