MIX WITH FEELING

Softube's Console 1 hybrid virtual mixing console system offers the flexibility of a plug-in with amazing tactile control—and provides powerful channel-strip processing with the analog workflow that only a hardware controller can. It's a simple two-part system consisting of a channel strip plug-in and a dedicated hardware controller. With the plug-in activated on every track, the Console 1 hardware provides total command over the mix, allowing one to jump from track to track to adjust levels, dynamics and EQ settings. All processing is based on Softube's top-of-the-line analog modeling. Console 1 was also designed to be expandable with Softube plug-ins. Best of all, Console 1 works on virtually any DAW.
