TELEFUNKEN M80

Superior performance with dynamic convenience

Featuring a wide frequency response, the M80 serves up condenser-like performance in a thin, rugged design. The head and capsule were designed to reduce proximity effect, resulting in a more consistent production experience regardless of venue. This was especially apparent in the studio when we miked our Fender Deluxe Reverb. Because of the broad range of frequencies this amp produces it's often a battle to find the sweet spot using a single mic—and the M80 succeeds where many have failed.
