LINE 6 JTV-89F**Cutting-edge versatility that delivers**

Designed by boutique luthier legend James Tyler, the Line 6 JTV-89F is one mean metal machine. The pair of high-output pickups and Floyd Rose licensed trem form a solid foundation for Line 6's Variax modeling technology. Variax modeling provides emulations of the most prestigious guitars the world over and can simulate alternate tunings on the fly. The new Variax Workbench HD software makes it easy to create custom settings, too. Add a Line 6 POD HD500X multieffects floorboard to the mix, and the tones are limitless.
