## FOR THE JET-SETTER

Traveling with an acoustic guitar is a headache. Short-scale guitars are less than enjoyable, and even the smallest full-scale options still feel oversized when it's time to stow. **Traveler Guitar's AG-105EQ** offers a full 25 1/2 inch scale length in an instrument that's only 32 1/4 inches long. Acoustically, the AG-105EQ is loud enough that you don't need to plug into the built-in headphone amplifier to play in a small setting, and a Shadow Piezo electronics system provides full-sized sound onstage.
