## CAD AUDIO GLXUHB UHF WIRELESS MICROPHONE SYSTEM

Feel the freedom to roam

Want to go wireless but don't want to break the bank? The CAD Audio GLXUHB is a dual channel wireless system that can be used for vocals and instruments at once. The feature-rich receiver incorporates dual antennae, output controls and XLR jacks.

The handheld dynamic mic provides low handling noise and excellent feedback rejection, and the body pack transmitter works interchangeably with an instrument cable or condenser headset. Both transmitters can run on batteries for over 10 hours of wireless freedom.
