

TOP GEAR

UAD TO THE NEXT LEVEL

What could possibly make the Universal Audio Apollo series even cooler? How about integrated Thunderbolt technology. With full Thunderbolt bandwidth at their disposal, the new **Universal Audio Apollo Twin** models provide massive DSP power with so little latency one can actually track—not just mix—with a full lineup of pro-quality UAD plug-ins. That's on top of a set of plug-in-controlled Unison mic preamps. All told, these sleek desktop audio interfaces provide anyone the kind of production power previously reserved for big-name studios.
