FOCUSRITE ITRACK DOCK

Pro-quality iPad recording rig

Focusrite iTrack Dock is among the first iPad-based docking interfaces to move from novelty status to serious recording device. That's because the iTrack Dock comes packed with a pair of world-class Focusrite Scarlett range preamps and high-end 24-bit/96 kHz digital converters that offer headroom to spare. It easily accommodates both iPad and iPad mini models—plus it can power your device as a nice bonus. It also worked flawlessly with a number of recording apps, and the USB MIDI port played well with a variety of class-compliant controller keyboards.
