## AWESOME MUSICAL INSTRUMENTS PICKUP TONE MULTIPLIER

Find yourself a few new tones

**FOR:** Tone junkies. The Pickup Tone Multiplier allows you to dial up a whopping range of 35 tones from a standard set of Strat pickups. It's a great-sounding addition that will coax tones you've probably never heard from your instrument. At the

heart of the design are mixing and matching phase, series and parallel functions for each of your pickups. The unit we tried came pre-installed in a pick guard for easy installation. After dropping in pickups and soldering the ground wire, we were good to go. We were impressed with the multiplier running both into a vintage Super Reverb and a '71 Marshall.

**NOT FOR:** Active/powered or piezo pickups.
