# SKB FOOTNOTE AMPLIFIED PEDALBOARD

## Pedal power

**FOR:** A pedalboard that goes to 11. One of the world's largest manufacturers of instrument cases, SKB has developed a smart line of pedalboards designed for musicians by musicians. The FootNote has a host of bragging rights, most notably the title of being the world's first amplified pedalboard. Rock out with up to eight 9-volt battery powered pedals on the tour bus, in your bedroom or nearly anywhere with the AC adapter or six D-cell batteries. Plug your iPod into the auxiliary input to jam along with your favorite tracks. The built-in 5-watt Gary Sunda-designed amp sports a two-band EQ and nicely powers the 6-inch Eminence speaker, mutable via the speaker-off switch. We were even able to power a 4x12 cabinet with the external speaker jack. Other features include a cable tester and a line out to allow continued rocking in the event your amp gives up the ghost.
