PLANET WAVES AMERICAN STAGE INSTRUMENT CABLES

Get plugged-in right

FOR: A solid connection. Noting the lack of manufacturing consistency in the market, Planet Waves set out to design a cable plug that was sure to make a great connection regardless of instrument or manufacturing point. The only part of the cable not manufactured in the United States is the patented plug, which is manufactured for Planet Waves by Neutrik in Liechtenstein. A robotic manufacturing process ensures a perfect and permanent bond between the wire and the plug, providing consistency of tone and reliability over time. The end result is a great-sounding cable you can hear snap firmly into place.

NOT FOR: Crackle and pop.
