TC-HELICON MIC MECHANIC: VOCALS DONE RIGHT

Plenty of live vocal tools have hit the market recently, and many in the stompbox format. What makes the **TC-Helicon Mic Mechanic** unique is its back-to-basics approach. Rather than sporting dozens of superfluous effects—that are more fun than practical—the Mic Mechanic provides essential vocal processing including reverb, delay and pitch correction. It also features a unique Adaptive Tone control, which acts like your own personal sound engineer, riding the EQ to bring out the best in your voice.
